***ABSTRACT***

*The development of information technology is increasingly rapid and its application has penetrated into various aspects or areas of life, information technology has also been widely used by clothing stores or distributions. The benefits of this system are that customers can easily buy clothes without having to come to the distribution directly, the previous system still uses a fairly simple cashier service by only being recorded in a book, service to customers is less than optimal, the calculation of transaction results that only relies on manual calculations without supported by a computerized system and assisted by an employee at the cashier and another at the service department, distribution owners often experience being overwhelmed in providing service to customers when the distribution is busy. The conclusion of this website system is that customers will find it easier to buy products from distributions without having to come directly and distribution owners can easily view transaction data.*
