ABSTRACT

Vespacology Yogyakarta convection was established on August 24, 2014. At the beginning of its establishment and development, this convection was originally named "Lajur Kiri". This Convection used to be just a conventional convection. In early January 2013, "Lajur Kiri" Convection started a business in Yogyakarta. However, with a lot of competition in the world of convection in Yogyakarta, "Lajur Kiri" Convection has difficulty to become a growing business in Yogyakarta. Finally, the owner of Convection "Lajur Kiri" has a new creation by creating t-shirts and all kinds of merchandise for Vespa fans. Thus, "Lajur Kiri" Convection has officially changed its name to Vespacology Convection on August 24, 2014. With many Vespa fans, the convection has begun to develop. From year to year, the convection receives more and more orders from various Vespa fans in Indonesia. Although it has developed, the financial records in the convection still use the manual method by using paper recordings. It is very vulnerable to mismanagement of financial data. For this reason, a web-based application was created that aims to assist convection parties in managing financial data. With this application, it will be easier for convection parties in financial management so that the management of financial data in the convection can be managed in a more structured and systematic way.
