

IMPLEMENTATION OF WEB-BASED SANDAL AND SHOES SALE INFORMATION SYSTEM

(Case Study: Various Sandals and Shoes Shops in Muna Regency)

ABSTRACT

Aneka Sandal and Shoes is a shop that has been engaged in selling sandals and shoes since 2007, located on Jalan Wolter Monginsidi, Kel. Raha I, District. Katobu, Muna Regency, Southeast Sulawesi (93611). The Sandals and Shoes shop serves the purchase of sandals and shoes for men and women, both in the form of unit purchases and wholesale purchases. However, in serving the sale of sandals and shoes, they still use notes in notebooks. Using this conventional method is considered less effective in processing transaction payments. Based on these problems, this research builds a web-based information system for selling sandals and shoes. The data processed are admin data, customer data, supplier data, product data and transaction data. The results of this study are a web-based sandal and shoe purchase information system using the Midtrans payment gateway which is expected to assist the admin in monitoring the sale and purchase of sandals and shoes, and make it easier for customers to make purchases online.
