ABSTRACT

Hidayatullah Laptop, Sumbawa Besar is a company engaged in laptop service. In the competition for many laptop service shops, each laptop service business owner tries to improve service to their customers. The number of customers at the laptop service center using telephone and sms is not fast and effective because of the lack of proper information to find out what damage has occurred and to know the tariffs that must be issued based on the damage. This website-based laptop service call service application was developed using the PHP (Pear Hypertext Preprocessor) programming language, HTML (Hypertext Markup Language), coupled with CSS (Casading Style Sheet) to make it look more attractive, then MySQL was used for data storage as database management. system, as well as javascript to support the display to make it more interactive.

Keywords: Application, Services, Website.
