ABSTRACT

Futsal has now become the right choice to play a soccer game because futsal can be said to be a simplified version of football because futsal can be played with fewer players than football from each team and a smaller field. Internet technology and web technology can be used as tools for time operations, for example, online scheduling and ordering systems that can access them anywhere and anytime. Meteor Futsal Court And Billiard is a futsal field and billiard table rental service provider located in the city of Yogyakarta. In the futsal field rental transaction system, Meteor Futsal Court And Billiard has not used and utilized web media as a means of support and marketing so it is still a bit difficult and inconvenient for customers . Objective From the case of problems that occur, it is urgently needed a system that is able to manage the futsal field ordering system so that it can facilitate services at Meteor Futsal Court And Billiards. The ordering service process still uses telephone or whatsapp media or customers come directly to the place to place an order. Customer results are not only a source of income for Meteor futsal, but also a long-term revenue asset, therefore optimizing profits and customer satisfaction. The programming languages that will be used are HTML, PHP and MySQL which are used as databases. With this application, it is hoped that customers can easily use and access information about the field schedule and make reservations for the Meteor futsal field more easily, thus the loyalty of customers from Meteor futsal can be maintained and maintained so that they will not switch to other futsal rentals.
