ABSTRACT

Tourism is a trip made for recreation or vacation for some people in order to calm life. Tourist objects are increasingly varied and more and more developed from urban areas to the rural level. The Balong District Office is one of several sub-districts that regulates tourist attractions in the area. Regional tourism which is increasing over time and the number of tourists visiting has also increased, making the operation of several tourist objects experiencing problems. Constraints such as information on several tourist objects that do not reach the community, especially the people of Balong District. Submission of information that is lacking does not even make some tourist objects experience operational problems. Making a system that can handle information along with ticket reservations, can make it easier to operate tourist objects and visitors to order tourist tickets more easily. The system created will use HTML and PHP as programming languages and MySQL as a database. The data used are village data and tourist village data in Balong District.
