ABSTRACT

Terra Computer System Kediri is one of the Course and Training Institutes located in Kediri City Regency. Terra Computer System Kediri provides various kinds of educational programs in accordance with the current industrial era, which is based on information technology. However, the registration and payment mechanisms are still done manually. This makes the data that has been entered scattered everywhere because it is not put together in an application. To facilitate data checking, an online payment system or payment gateway is needed. The use of this application can also be accessed anywhere and can be paid according to the provisions that have been made by the LPK. With the development of the SPP Payment System using this Payment Gateway, it will make it easier for the LPK and also the students. The design software used in building this application is PHP (Pear Hypertext Propocessor) as a programming language, phpMyAdmin as a database server, CodeIgniter as a web application network.
