ABSTRACT

Ordering Information System at Ion Graphic Yogyakarta is still done manually. Can provide information about customer data and web-based printing, thus helping speed and quality in delivering information and making it easier to order printing so that consumers don't have to come to the office. In this system, the web can only be accessed by users who are consumers and admins. The system has been finished in practical work that the author has made, then it will be developed again according to the needs of the agency. In this study, apart from describing the theoretical study used as the basis for the preparation, it will also discuss system development. So that it is hoped that it can be implemented in agencies, in developing this system it is expected to produce additional features in the form of live chat and payment gateways.
