ABSTRACT

The travel agency booking system at KD Tour's & Travel is still done conventionally. By using a website-based travel agency booking system, it helps in the speed and accuracy of existing booking data on KD Tour's & Travel and makes the booking process for travel agencies more effective and efficient. In this system, the website can be accessed by admins and users, as admins are employees, as users are customers. The method used in developing this system is SDLC (System Development Life Cycle) with the waterfall process model. In this study, in addition to describing the theoretical study used as the basis for the preparation, it will also discuss the system design and the creation of a travel agency booking website at KD Tour's & Travel. So it is hoped that it can be implemented in a product that will simplify the process of ordering a travel agency and assist in the reporting process.

Keywords: System, Travel Agency Booking, Website-Based.
