ABSTRACT

This study aims to find an application model for submitting the title of the University of Technology Yogyakarta final project. The benefits of this research are that it can make it easier for students to submit a final assignment title and make it easier for study programs and lecturers in the process of accepting the final assignment title from students. In the process of making this website-based application, software such as Sublime Text 3 is used to create HTML and PHP source code. The difference from previous research lies in the Framework and some additional features, while this study uses the Bootstrap Framework. This study uses a process model of the system stage data, context diagrams and data flow diagrams. The results of this study are a web-based application for submitting the title of the final project, this application was created to assist students in the process of submitting the title of the final project and to assist in the delivery of information for submitting the title of the final project from students to the study program and lecturers of the Computer Engineering Study Program, Faculty of Science and Technology, University of Technology Yogyakarta.

Keywords: *Application, Final Project Title, Website*
