ABSTRACT

The Masto Motor Showroom is one of the showrooms in Sojomerto Village which was established on March 24 2018, the showroom only provides used motorcycles and spare parts. In data storage, showrooms still do it manually. This method is considered less efficient because the process is long and does not rule out the possibility of errors due to human error factors. Based on this background, it is necessary to create a web-based motorcycle sales application that can help and simplify the work of employees. The application is implemented using the Laravel Framework, the PHP and MySQL programming languages. The result of this research is a motorcycle sales application utilizing midtrans payments. Through a simple test, it is proven that the application is generally able to help employees and the parties concerned in handling and reporting data.
