ABSTRACT

Audio sound system rental services have problems in terms of promotion so that not all the public knows about audio sound system rental information. In fact, many rental owners do not yet have an adequate administrative system. At this time a lot of website-marketplace sites are popping up. The marketplace website is very mushrooming because it is a very suitable place for business people to transact and market their products and also makes it easier for consumers to find the product information they need. How important it is to build a marketplace system for audio sound system service providers that can bring together several sound system service providers and tenants and make it easier for prospective tenants to find and get the needs they need at relatively cheaper prices. The system design is made using HTML, PHP, CSS, Java Script and MySql as the database and the payment method is using Midtrans.

Keywords: Audio Sounds System, Marketplace, Midtrans, Web.
