

ABSTRACT

Reyro Store, located in Yogyakarta, is a shop that sells various kinds of clothes, jackets, shoes, hats and bags of different types, brands and sizes. For now, buyers who want to buy goods at Reyro Apparel Shop must come to the shop. In its daily activities, Reyro Store still uses the conventional method by recording in a book for each transaction. So this is considered less effective and there are many gaps in the occurrence of errors. The design of this information system is web-based using PHP as a programming language and MySQL as a database. This application will make it easier for owners, employees and buyers to carry out the buying and selling process because buyers can order goods via the web without having to come to the store directly. The results of this research are in the form of a web-based sales system application at the Reyro Store that helps in the process of buying and selling goods and can display reports according to the period.
