## **ABSTRACT**

*Web-Based Consumables Inventory Information System is a process of processing inventory data in the school warehouse by producing the information needed by the head of the boarding school warehouse, the head of the madrasah, the treasurer, and the teachers. Inventory data is one example of an information system designed to assist the work of an agency in processing data on goods. The Islamic boarding school which is the object of research is the Miftahunnajah Islamic Boarding School. The purpose of this study was to develop a web-based consumable inventory information system at the Miftahunnajah Islamic Boarding School. A computerized inventory information system can help data processing become easy, fast and accurate and solve problems that arise in old systems.*
