ABSTRACT

The longer and the changing years, of course a lot of technological developments that occur. Like it or not, all existing technologies must be developed to suit the needs of today's users. In terms of registration is also experiencing changes, of course, needs to be developed. TK Negeri Pembina Bagelen is an institution engaged in education. In the process of accepting new students it is still carried out with a system that has not been computerized. The purpose of this research is to create a web-based registration information system. The system presents a registration page to register at the school that is the object of research, provides information about the school and the school's vision and mission. Serving pages for teachers and parents of students. The main objective of the target is people who live around the school and far from the school area that is used as the object of research. The system is built using the Programming Hypertext Preprocessor (PHP) and Hyper Text Markup Language (HTML) programming languages and uses a MySQL database.

Keywords: Registration, Education, web, Information System.
